

L'huile des records du monde

LR -25

Liquid Coolant : Protection -25°C

USES

Formulated with monoethyleneglycol, distilled water and specific additives, this ready-to-use liquid avoids any blending (water + antifreeze) preparation.

Particularly recommended for radiators in aluminium, cast-iron of all type of vehicles (cars, trucks, public works, agriculture...) especially when the OEM recommends a -25°C protection. Drain according to the OEM recommendations (every 2 or 3 years).

MAIN CHARACTERISTICS

	Units	Typical values
Colour		Blue
Aspect		Clear
Density at 20°C	kg/m ³	1061
Protection	° C	- 25
Boiling point (under A.P.)	° C	107

PROPERTIES & ADVANTAGES

- Thermal conductivity and specific energy allowing an efficient evacuation of the calories
- Good protection against frost
- Excellent protection of the metallic parts against rust
- Good anti scale and antifoam properties
- No agressivity against elastomers and plastic materials
- Nitrates, phosphates and amines **free**

PERFORMANCES

NF R 15-601 type 2 (French standard)
