ANTIUSURE MOTEUR

Molybdenum additive for engine oils

USES

Colloidal suspension, **reinforced with specific additives to face wear troubles.**
Added to the engine oil, this product is recommended for severe uses and for ancient engines (collection, ...).

MAIN CHARACTERISTICS

	Values
Color	Grey-green
Density at 20°C	0.901
Kinematic viscosity at 100°C	13.8

PROPERTIES & ADVANTAGES

- **Improves the antiwear qualities** of the lubricant, particularly in cold conditions for starting the engine or in hot conditions when the lubricating film may disrupt.
- **Reduces the engine temperature**
- Reduces the noise
- Maintains properties even at high temperature when the conventional lubricants do not keep all their qualities
- **Protecting coat** on every mechanical part when moving

DIRECTIONS

Use a **dose** (200 ml) for 4 liters of lubricant.

Make the mixture before or add ANTIUSURE MOTEUR directly into the engine oil pan.
