ANTIUSURE TRANSMISSION

Molybdenum additive for gear oils

USES

Colloidal suspension, reinforced with extreme pressure additives.
Added to the gear oil, this product is recommended when the gear shifting is difficult.

MAIN CHARACTERISTICS

	Values
Colour	Grey-green
Density at 20°C	0.918
Kinematic viscosity at 100°C	29.8 mm ² /s

PROPERTIES & ADVANTAGES

- Improves the antiwear and extreme pressure qualities of the gear lubricant.
- Reduces the noises
- Allows to keep the advantages of the lubricant when the driving conditions are severe or in case of ancient materials.
- Excellent resistance to high pressures

DIRECTIONS & CAUTION USE

Use one dose (100 ml) for 1 to 2 litres of lubricant.

Make the mixture before or add ANTIUSURE TRANSMISSION directly into the oil pan.

Not to be used in automatic gear boxes and limited slip differentials.
