

L'huile des records du monde

# GALVAZINC

## Antirust coating

### USES

---

Formulated to protect by galvanisation at low temperature **any metallic construction, framework, heating tubes before putting together**, when exposed to humid and/or marine atmospheres.

Particularly recommended for the protection of **metallic pieces after soldering operations** (iron, light metal alloy, galvanised steel).

Can be used before applying a coat of paint.

### MAIN CHARACTERISTICS

---

	Typical Values
Aspect after drying	Bright
Colour	Non metallic grey
Drying time : out of dust	20 minutes
Complete	60 minutes

### PROPERTIES & ADVANTAGES

---

- Passivation of the surface by the formation of an iron and zinc alloy near the surface
- Rapidity of drying
- Bright metallic aspect
- Recoverable by any kind of paint

### DIRECTIONS

---

1. Clean the surface and take away every friable part of the metal
2. Shake quickly the aerosol
3. Spray at 20 cm, avoiding the runs
4. Drain the aerosol head down after use
